

## "All enclosed" paint production line

"All enclosed" paint production line is one of the most advanced technology in the world, China Sower company invented this technology and used in machinery manufacturing. The 1 +2 +3 mode has innovated a new technology; compare to traditional technology, this mode has many advantages.

[Click here](#)

What is 1 +2 +3 mode?

1 is the raw materials metering conveyor system. The automatic feeding system has break with the traditional manual feeding, achieved the automatic measurement and feeding of powder and liquid charging stock additive, reduced the environment pollution, improved production environment and guarantee the safety of human.

2 is the coating production closed system. The automatic synthesis system has changed the semi-automated synthesis. You can scatter, grind and mix paint by overall monitoring easily.

3 is the automatic filling system. The labor consumption has been reduced greatly with our automatic filling system. Barreling, filling, capping, stacking can be achieved automatically.

This equipment adopted display system and it also can program all the productions with high precision. This controlling system is very easy to use, and it can reduce labor force, increase production capacity.

"All enclosed" has many excellent features: environmental protection, high security, high efficiency and high automatization.
