

Mixing Equipment : SJB-M Anchor mixing equipment

[Click here](#)

Series: Mixer

Name: SJB-M Anchor mixing equipment

Model: SJB –M

Characteristic: Low circulate, low speed operation, low energy waste, strong carrying capacity. Cast or weld, different specification, available for large scale production, convenient installation and disassembly.

Brief: Suitable for solid-liquid, liquid-liquid mixing and high speed mixing with scrape board, most effective for solid-liquid mixing, Rotate speed: 0.1-85rpm, applied in chemical industrial, pesticide, print aids, medical, food, coating, etc.

Service: Sower has different mixing equipment according to various mix crafts optimized the combined system function, which containing many elements, such as: craft, capacity, investment, factory, etc. our sales engineer will present you most rational solution about model choice, equipment allocation, craft flow.

Details: Radial oar, suitable for high and middle viscosity material mixing, heat passing, circulating, solid suspending dissolving, etc.

Capacity: 1-100000L

Material: SS304SS321SS316LQ235-A

Speed adjustment: Double speed motor, electromagnetic speed control, inverter speed control

Decelerator: Cycloidal pinwheel decelerator, gear decelerator, worm decelerator

Seal: Mechanical seal, stuffing seal, oil seal

Model choice:
