

Mixing Equipment : SWJB large-scale mixing equipment

[Click here](#)

Features:

- 1) Stable working, noiseless, easy to disassemble
- 2) Available for continuous use
- 3) Energy saving, compact structure, high precision transmission
- 4) Strong loading capability and easy to assemble

Name: SWJB large-scale mixing equipment

Model: SWJB

Characteristic: Stable working, low noise, available for continuous use, energy saving, compact structure, high precision transmission, strong loading capability, easy disassembly

Brief Introduction: Sower Company is specialized in designing, manufacturing and developing in liquid mixing equipment, the mixing gearing device for vessel. Several products have obtained national patents and technology innovation item

Detailed Introduction: Sower mixing equipment consists of several mixing device, which enables Sower company to provide mixing device with optimized, more reliable processing with lower maintenance cost and operation cost. It is applied for liquid-liquid(mutual solve, disperse)solid-liquid, air-liquid or several status mixed together whose power range: 0.55- 300kW, rotation speed range: 0.01- 3.000r/min

Service: For different flow processing, Sower company have different type to

match it and optimizes the combination, which makes the system works at its best status. Optimizing the combination should take comprehensive processing, output, investment scale, workshop and many other factors into consideration. Consult with Sower professional sales engineers, we will formulate most reasonable equipment configuration, processing flowchart, equipment layout plan according to your requirements

Motor: A/C motor

Power: 380V. 50Hz

Rotation speed adjusting means: Double speed motor, electromagnetic speed control, various speed control

decelerator: Cycloidal pinwheel decelerator, gear decelerator, wom decelerator, wom wheel screw positioning working support

Seal: Mechanical seal, stuffing seal, oil seal and the like

Package: Wood case
